| **Patient ID:** | SYN-CANCER-001 (Synthetic) | **Document ID:** | doc-006 |
| **Document Date:** | 2026-01-20 | **Document Type:** | Procedure Note |
| **Facility:** | Sunrise Oncology Centre | **Department:** | Operating Room / Surgical Oncology |

### OPERATIVE SUMMARY

**Procedure Date:** 2026-01-20

**Documented Status:** completed

**Preoperative Diagnosis:** Documented right breast neoplasm.

**Postoperative Diagnosis:** Documented right breast neoplasm post-resection.

**Procedure Performed:** Right partial mastectomy with sentinel lymph node biopsy.

**Anesthesia:** General endotracheal anesthesia.

**Estimated Blood Loss:** Approximately 25 mL.

### PREPARATION & SENTINEL NODE LOCALIZATION

The patient was identified, verified, and brought to the operating suite. Preoperative technetium-99m sulfur colloid radiotracer was administered periareolarly. Gamma probe confirmed focal radioactive count in the right axilla prior to incision.

## OPERATIVE NARRATIVE & TECHNIQUE

A curvilinear incision was made over the right breast upper-outer quadrant directly overlying the palpable lesion. Full-thickness excision of the lesion was carried down to the pre-pectoral fascia. Specimen oriented with standard surgical sutures (superior, lateral, deep) and submitted for surgical pathology.

A separate transverse incision in the lower right axilla was performed. Using the handheld gamma probe, two hot sentinel lymph nodes were identified, dissected free, and sent for permanent histopathological evaluation.

Hemostasis achieved with electrocautery. Surgical counts verified correct. Wounds closed in anatomical layers using absorbable sutures. Sterile dressings applied.

## DOCUMENTED TEXT ANCHOR

Procedure note documents: Right breast partial mastectomy and sentinel lymph node biopsy completed.
